

One App to control them all

App for Android and iOS

The TiO Home App is the epitome of our "Outside In" approach to product development. We designed the App to be beautiful, functional, and above all, easy to use. In other words, we designed it for YOU! The TiO Home App is the key to the entire TiO experience.

The TiO App Captures Moods, Creates Experiences, and Controls every aspect of the TiO ecosystem in your home.

The real power of the TiO App is that empowers YOU! No complexity, no learning curve, no adapting your lifestyle to the system. Just you and TiO turning your house into the home you want.

System Configuration

The TiO PRO App allows you to configure a complete TiO home automation system quickly and easily.

Once the Elements are installed and powered up, TiO guides you through the process and gets the system up and running in almost no time - less than 60 seconds per TiO Element.

Beautiful and Intuitive User Interface

Remember, it's all about YOU! We designed the TiO Home App to be easy to learn and fun to navigate. Take TiO for a spin. You're going to love it.

Optimized for Your Device

TiO has been optimized for the device you want to use - whether it's Android or Apple. TiO Home is a free download from the Google Play Store (TiO Turn it On) for your Android phone¹; or the Apple Store for your iPad or iPhone¹. So use the platform you like best.

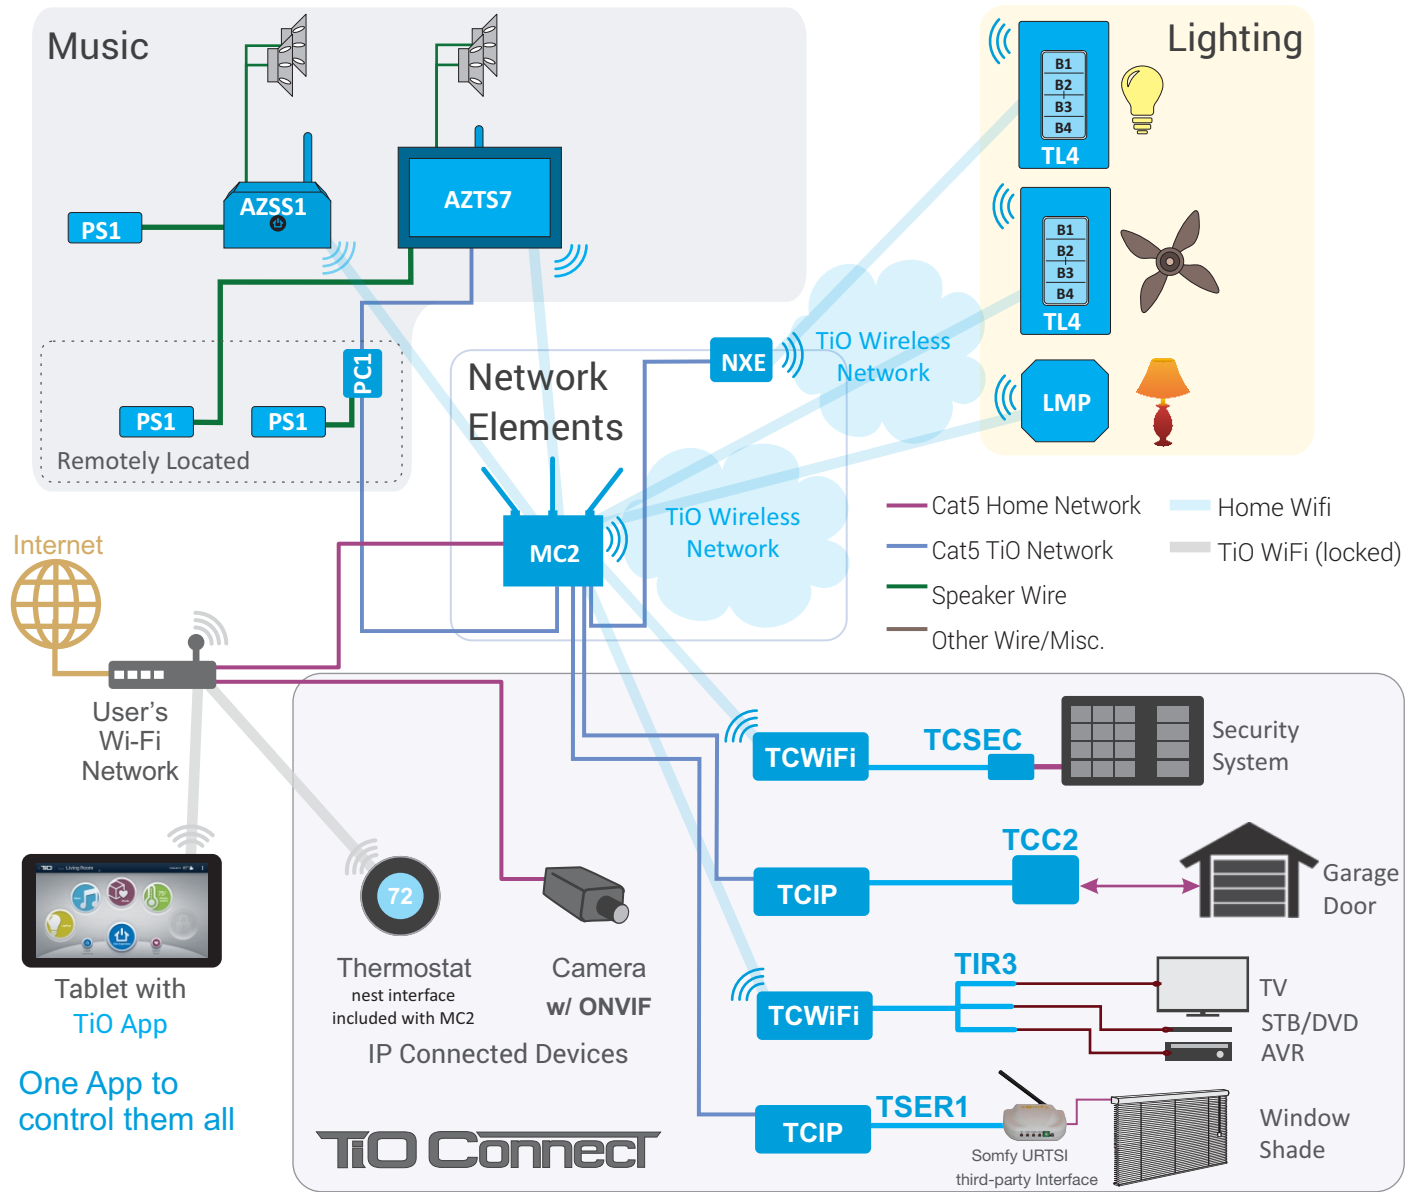

TiO Captures your Mood™

Moods are captured with the TiO Home App right from your tablet. Moods are single room scenes created by adjusting your TiO Elements to the desired settings then capturing the settings with a single button press. This Mood can be activated anytime from the App or any TouchStream in the system; scheduled to occur at a preset time; or assigned to any button on a TL4 to be easily recalled whenever you want.

Create an Experience™

Experiences are a collection of Moods, and are created by dragging the Moods into a newly named Experience right on the TiO Home App. Experiences can be recalled any time, scheduled at any time, or assigned to any button on a TL4. The ultimate in adaptability and flexibility.

TiO Ecosystem

Imagine...

a "Goodnight" button near your bed that turns off all the lights and music in the house... sets the temperature you like for sleeping... lowers all the window shades...
